Selected Works for Sale

Racine Art Museum

Racine Art Museum
Works for sale by Toshiko Takaezu

When RAM was gifted Toshiko Takaezu's largest and most complex work, the *Star Series,* the artist acknowledged her recognition of the museum's commitment to contemporary art—in particular, the museum's longstanding connection to those working with craft media. To further support the institution and as a reflection of her generous spirit, Takaezu also gifted works that she intended RAM sell in order to sustain storage and maintenance of collection holdings.

With this exhibition, we are also offering a number of works by Takaezu for sale through the RAM Store. These works have not been a part of the museum's collection—they have been held until there was an opportunity to fulfill Takaezu's desire that they be sold to support collection operations.

For inquiries, please contact RAM Retail and Guest Services Manager Andrea Mickelson at amickelson@ramart.org.

Toshiko Takaezu

Forms with Rattles
Takaezu often included "rattles" in her signature forms—vessels with nearly closed-off tops. The "rattles" were added while they were still wet on the wheel before enclosing them completely. She would wrap each in a bit of newspaper first, which she thought of as "sending a message" to the inner space of the piece as she dropped it in. After the piece was fired and one picked it up, it was Takaezu's intention to give the handler an unexpected sensory experience.

Works known to contain a rattle are identified as such in their titles—however, the absence of that designation does not necessarily mean the vessel is silent.

As these works have been delicately handled, some may contain a rattle not yet discovered.

Shipping
Buyers are responsible for all costs associated with packing and shipping. RAM Downtown staff can provide crating/shipper recommendations, if needed.

Note: There is a large firing crack in the base. It is not damage but rather it is "in the making" and occurred during the firing process. Many of Takaezu's garden seats have such firing cracks in the base. Some people will have them conserved to further stabilize the work, but most times it's not necessary.
